

AIT Circular Marketplace

Progress Presentation Brief - 8 October 2026

AST02.21 E-Business Development and Technology - Chidsanuphong Pengchai (primary contact),
Lucja Wojtowicz, Samichi Rungta

Purpose of this brief

The course asks the progress presentation to show what has been built, a live demo, any scope changes from the proposal, and what remains before the final submission on 19 November. This brief combines our draft outline with those requirements, gives starter content for each slide, and lists the open questions we need to settle (Section 4).

1. Slide plan (about 12 slides)

#	Slide	Notes
1	Title and team	Name the primary contact.
2	Recap: problem and solution	30 seconds. C2B2C, AIT-only, rent with deposit escrow.
3	Progress against the timeline	Phase 1 (scoping) and Phase 2 (core build) done; Phase 3 next.
4	MVP scope	What is live, simulated, or future work (Section 2).
5	Scope changes from the proposal	Includes the fee model decision (open question 1).
6	Revenue model and money flow	Rental commission, escrow fee, who holds the money.
7	Tech stack and technical infrastructure	Separate what is built now from what is planned.
8	Use case diagram	Still to be drawn.
9	Prototype demo	Live demo plus a backup recording or screenshots.
10	Investment, projected revenue and expenses	First draft, built from stated assumptions.
11	Human resources, payment methods and delivery	Team roles now and after launch.
12	Next steps, risks, questions for the instructor	Plan to 19 November.

The detailed website implementation section belongs in the final report (Phase 4). For this presentation the demo covers it; we say annotated screenshots will follow in the report.

2. Starter content per slide

Progress and MVP scope

- **Live (mock data):** home, browse with filters, listing detail with item history and ratings, sell form with fee breakdown, pre-arrival needs registration, rentals and escrow status, chat UI, premium placement.
- **Simulated:** payments, deposit release, dispute resolution.
- **Not built yet:** AIT email login, a real database, admin dispute queue, automatic matching and notifications, seasonal surge highlighting.

Revenue model and money flow

- Current prototype (matches the proposal): sales are free. Rentals pay a 10% commission plus a THB 30 escrow handling fee. Premium placement costs THB 49 for 7 days.
- At booking the renter pays: rental fee + 10% commission + THB 30 + refundable deposit, through the payment gateway.
- The platform keeps the commission and escrow fee, pays the owner the rental fee, and holds the deposit until the return is confirmed or a dispute is resolved.
- Holding other people's money is regulated in Thailand. The hold should run through the gateway or a licensed partner, not our own bank account. To be checked (open question 4).
- Card fees on the deposit (roughly 3%) could cost as much as the escrow fee itself: a THB 1,000 deposit costs about THB 30 to collect.

Tech stack and technical infrastructure

- **Built now:** Next.js (App Router) with in-memory mock data and simulated payments; deployed on Vercel through the GitHub import.
- **Planned:** Supabase (Postgres database, auth limited to @ait.asia, photo storage, realtime chat, scheduled escrow auto-release) and Omise or 2C2P for payments.

Use case diagram

- **Actors:** Seller/Owner, Buyer/Renter, Incoming student, Admin/Moderator, Payment gateway (external), Scheduler (auto-releases escrow).
- **Use cases:** verify AIT email, create listing, browse and search, chat, register a need, book a rental, pay, confirm return, file a dispute, resolve a dispute, rate, view item history.
- The four user flow diagrams (seller, buyer, owner, renter) already exist and can support this slide.

Investment and projected revenue (example only)

Placeholder numbers to show the method. Replace them with real AIT enrolment figures and our own estimates.

Item	Assumption	Per semester
Rental commission	150 rentals x THB 300 average x 10%	THB 4,500
Escrow handling fee	150 rentals x THB 30	THB 4,500
Premium placement	40 placements x THB 49	THB 1,960
Total revenue		about THB 11,000

- Revenue is small, so costs stay lean: Vercel and Supabase free tiers, a domain (about THB 400 per year), and gateway fees per transaction.
- Frame it as a pilot. Growth comes from more cohorts, plus AIT staff, faculty and exchange students.

Human resources, payment methods and delivery

- **Now:** three team roles (development and admin, business and report, research and finance).
- **After launch:** developer/maintainer, part-time student moderators for disputes, partnerships lead (housing office, student union), finance and payment compliance.
- **Payment methods:** via the gateway; PromptPay QR and cards are the likely options (to confirm).
- **Delivery:** no shipping. Handover at campus pickup points (dorm buildings, faculty areas). Pre-arrival matches are held until the incoming student arrives. Rental returns use a photo condition check.

3. Inconsistency to fix before presenting

Our documents disagree on fees. The proposal and the prototype make sales free and charge only on rentals. The page mapping document (Mapping&UF.md) charges 10% on every transaction, sales included, with escrow on sales too. We need to choose one, present it as a scope decision if it changes, and update the other document and the user flow diagrams.

4. Open questions

Team decisions - business model

- 1 Fee model: keep sales free (proposal) or charge 10% on every transaction (Mapping&UF.md)?
- 2 Do sales also go through escrow, or only rentals?
- 3 Are THB 30 (escrow fee) and THB 49 (premium placement, 7 days) the final amounts?
- 4 Who holds the money: a gateway feature (delayed capture, split payouts) or a licensed partner? Omise or 2C2P?
- 5 Who pays the gateway fees on deposits and on refunds: the platform, the renter, or the owner?
- 6 Which payment methods do we support (PromptPay QR, cards, others)?

Team decisions - rules and operations

- 7 How long is the dispute window (24 or 48 hours)? Who decides disputes, and what are the partial refund rules?
- 8 Which rental periods do we offer (week, month, semester)? What happens on a late or missing return?
- 9 What did the proposal notes "Attach the shops" and "Attach an eteller" mean? Do campus shops sell on the platform too?

Team decisions - build and report

- 10 For the final build, do we move to Supabase (real login and database) or keep mock data?
- 11 Which not-yet-built features do we commit to by 19 November (AIT login, matching, admin dispute queue, notifications)?
- 12 Revenue assumptions: how many AIT students per intake and outtake, and what share would rent?
- 13 Who draws the use case diagram, and who presents which slides?
- 14 Live demo or recording? Who prepares the backup?

Questions for the instructor

- 15 Is a simulated payment and escrow flow enough for the final build?
- 16 Which fee model fits the course better: free sales with rental fees, or a commission on everything?
- 17 How detailed should the financial projections be (one semester, one year, three years)?
- 18 How much legal and compliance detail is expected for holding deposits?
